Art Unit: 1756

Claims 30-35 are objected to because of the following informalities: the claims read on "an exposure apparatus" and are dependent on claim 24, which is an exposure method. Appropriate correction is required.

Claims 6-9 and 11-13 are objected to because of the following informalities: the word "blight" should be -bright-.

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 6-13 and 24-35 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-10 of U.S. Patent No. 5,601,957. Although the conflicting claims are not identical, they are not patentably distinct from each other because the alignment mark is the same. The application employs the mask comprising the alignment mark in a standard exposure system with the means for exposure and alignment sensor. However, it would be obvious that the mask made by the patent

Art Unit: 1756

would be used in an exposure system of which alignment is a known critical parameter.
